Installing wiring for a solar panel		X				X			
Installing wiring for a windmill		X				X			
Adding for appliances or equipment		X				X			
Wiring for a storable pool						X			
New service for detached structure		X		X		X			

¹An electrical slab inspection is required when any wiring is installed below a concrete slab.

²A trench inspection is required when wiring is installed below the surface of the ground.

³Pool potting, bonding and underground inspections are very important to prevent electrical shock.

⁴A change of service will not be needed if the service equipment is not modified.
