Wi-Fi Watch

Get clicking! *Watch out for public Wi-Fi, which may put your information at risk.* While it may be convenient, Wi-Fi at airports, hotels, coffee shops and other public places often is not secure. Individuals with malicious intent can establish Wi-Fi networks to eavesdrop on your connection to inject malware or to steal your financial or other sensitive information.

Tips to remember:

- Maintain the latest security software, OS, web browser and apps.
- Don't assume a Wi-Fi hotspot is secure, since it's not encrypted.
- Do not use financial accounts when using public wireless networks.
- Turn off features that allow you to automatically connect to Wi-Fi.

Together, we can make a difference!
